

# comfort & Security... for you and your loved ones

## Are you worried that your loved one may walk off or drive away and not remember how to get back home?

#### The Aetrex Navistar GPS Footwear System

is a revolutionary, patented technology, designed to help individuals who may have a tendency to wander or who are not totally independent and possibly at risk of becoming disoriented and lost. Their tendency to wander may be the result of Alzheimer's, aphasia, dementia, autism or any cognitive disability where a person is at risk.

For the Parent or Carer, these innovative shoes feature the latest 2-way GPS tracking technology that allows you to quickly track and locate the wearer of the Aetrex Navistar GPS Shoes at any hour of the day using the interactive tracking website service.\*

This extraordinary footwear will provide the comfort and increased security for you and your loved ones.

#### About Aetrex

Founded in 1946, Aetrex is widely recognized as the global leader in comfort and wellness footwear products and is dedicated to manufacturing the finest foot health products on the market today. The 65 year old company is headquartered in Teaneck, New Jersey and employs over 200 people, including 20 certified pedorthists.

\* Tracking plan service required. Subscriptions to the Tracking Service will be purchased from TrackingCentral Pty Ltd and will be purchased in AUS\$.
\*\*Any computer with internet service is required to access the tracking portal

#### How the Technology Works

The Aetrex Navistar GPS Footwear System features the latest GPS tracking technology embedded in the base of the right heel, providing real-time tracking. At frequent and specific time intervals, the GPS tracking device sends a signal to the central monitoring station determining the wearer's exact location and relays that information to a tracking website for you to view.

Available for both men & women Two styles: Lace-up & Double Velcro Strap Men's: 7-13, 14 | Women's: 5-11 (including half sizes) Colours: Both black & white The premise of the technology is based on a geographic boundary known as a "geozone" (which you create), alerting you when your loved one has wandered off too far from your preset location. When your loved one wanders off and leaves the preset geozone, you are quickly notified. The service also provides emergency tracking in case you need to locate your loved one immediately. Simply call the mobile number used with the GPS Shoe to receive a location notification. Location notifications can be received via the online tracking system, email, SMS or recorded voice message.
